

ABSTRACT

1 *Sub A*
2 A method of marking a skin for a vehicle interior trim panel comprising providing a skin
3 with a color and an outer skin surface. A laser is applied to the outer skin surface such that a portion
4 of the skin surface contacted by the laser changes color relative to a portion of the outer skin surface
5 not contacted by the laser to create a marking in the outer skin surface indicating the presence of a
6 vehicle component or function.
